

### (f) How the crossing is drawn

one owner at the junction pixels, or two

□ □ □ □ □ □ 0 of 6 pairs change

### (g) How the crossing is resolved

which arm continues into which

■ □ ■ ■ □ ■ 4 of 6 pairs change

Measured: 4.8–19.9 % of PLECTA's pixels have two owners; flattening them all moves  $F_1$  by 0.000.
